PROJECT EDITION

Open any PSD file, in each of them all the layer are grouped and named accordingly. In some of them you will find layer named "color edit" (placed above the background layer) - click twice on this layer to edit colors - you will pop up window with edit bars (use the "hue" bar). To edit photos find layer named "photo_edit" and click on it twice and in the newly opened document place your photo, then close it approving the changes.

Important recommendation: If you want get best effects please use photos without background, and then place them on the design. If you need help, let me know.

Remember - every PSD file contains "Remove this layer" layer. Just delete this layer to see entire design.
