

## Instructions:

1. Select the Brush tool from the Tools menu. Hitting the **B** key is another way to focus on it.
2. Select the current brush type from the menu at the top of Photoshop.
3. Use the small menu button to select **Import Brushes**.
4. Find the ABR file you want to use in Photoshop, and then select **Load**.
5. If that method doesn't work, another way you can try importing custom brushes into Photoshop is through **Edit > Presets > Preset Manager**. Choose **Brushes** as the preset type and then select **Load** to find the ABR file.

**Please note** that these brushes have been tested on all the versions of Photoshop. Don't hesitate to let us know if you need any help in using this product.
